

## MAINTAINING YOUR POST FRAME BUILDING

A couple times a year, conduct a walkabout of your build to note any areas needing attention

Watch for loose screws or lifting metal

Note and paint or repair any dings, dents, or scratches to keep them from causing rust in exposed metal

If insulated, check for any moisture or mold. To avoid these issues, good airflow is your friend

Clear any brush, grass, weeds, or snow that is piled up against your build, to avoid trapping moisture, attracting rodents, or causing scrapes

Clean out gutters (if applicable)

Check overhead and man doors, as well as windows to ensure good seals and working hardware. Clear any dirt/debris from tracks

Pressure wash to clean up dirt and dust, and to maintain a sparkly-clean exterior
